EDUCATION

Herald College Kathmandu (University of Wolverhampton) <i>Bachelor of Science in Computer Science</i>	Graduated : Aug 2025 GPA: First Class
---	---

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL, Concepts: OOP, System Design, Distributed Systems, REST APIs, Unit & Integration Testing, Web Scraping, API Integration, API Orchestration, Asynchronous Processing, Agile, Scrum, Performance Optimization, Solution Design Frameworks/Tools: Node.js, React, Nextjs, Expressjs, Tailwind CSS, Google ADK, Docker, RabbitMQ, MCP, Git, Linux, Databases and Cloud: MongoDB, PostgreSQL, MySQL

EXPERIENCE

Full Stack Internship <i>PORTPRO</i> - Engineered web scraping and data mapping services to automate data extraction workflows - Resolved production bugs and implemented feature enhancements based on real-time Jira tickets - Developed full-stack features using React, Node.js, PostgreSQL, and MongoDB - Leveraged AWS and Docker for scalable deployment and service management - Integrated RabbitMQ for asynchronous task processing and improved system reliability - Implemented webhook functionality for Orderful to enable real-time order event handling and seamless data synchronization.	August 2025 - April 2026 <i>Lalitpur, NP</i>
--	---

PERSONAL PROJECTS

Job Tracker React, TypeScript, Node.js, Express, PostgreSQL, Sequelize Developed RESTful APIs and a React dashboard supporting CRUD operations, job search, status management, and paginated application data. - Optimized API performance through query tuning, indexing, and caching, reducing latency and enabling smooth real-time data delivery at scale. - Implemented a responsive UI using Tailwind CSS, React Router, Axios, and reusable component architecture. - Containerized the PostgreSQL database and backend using Docker Compose and implemented environment-based configuration for development
Real Estate Property Management & Recommendation Platform <i>Node.js, React, Express.js, MongoDB</i> - Developed REST APIs for property listings, search/filtering, sorting, favorites, messaging, agent management, and property status updates. - Implemented secure authentication and authorization with JWT, bcrypt, protected routes, email verification, password reset, and admin access control. - Integrated a Python/FastAPI recommendation service to provide personalized property recommendations through the Node.js backend. - Built the frontend with React, Vite, Tailwind CSS, React Router, Axios, Radix UI, Chart.js, and React Leaflet, with Firebase integration for backend services.
AI Agents — Google ADK & MCP <i>Python, Google ADK, Gemini 2.5 Flash, MCP, TypeScript, Temporal</i> - Built LLM-powered AI agents using Google ADK and Gemini 2.5 Flash, implementing tool-based reasoning and dynamic query handling. - Developed Rocket and Movie Agents that interact with external APIs to retrieve launch, weather, movie, and other real-time information. - Integrated Model Context Protocol (MCP) with Streamable HTTP to connect agents with external tools and services. - Implemented tool orchestration and Temporal-based workflow concepts for handling multi-step and asynchronous agent operations
